HOME AUTOMATION CONTROL FROM INDOOR MONITOR

INTERNAL MONITOR INTERCOM

IP CAMERA VISUALIZATION FROM MONITOR

BENEFITS

♦ Integration costs are decreased by using a single touch screen, the MEET indoor monitor, instead of 2 touch screens for home automation and video intercom.

♦ Solution aesthetic is improved since the amount of devices is minimized to 1 single intercom monitor.

♦ Integration time and costs are dramatically reduced, since no SIP integration is required, so the technical knowledge required to do the integration is really affordable.

♦ All specific residential video intercom functionalities are provided by FERMAX MEET system, which is designed to offer the best user experience for tenants and visitors.

♦ With the 10" WIT video monitor, building IP network and home local network are completely isolated thanks to its 2 RJx45 interfaces.

In the same way the home automation can be controlled using smartphones or tablets, **INTEGRA App** can be used in the WIT monitor, since it is **Android 10** based. In this way we can provide a fixed and centralised control device in the installation.

WIT monitor can interact easily with **HORIZONE MINI WEB SERVER KNX** gateway, which is the main link with the home automation devices at home.

WIT 10" monitor is available in white and black colour with an optional flush mount box. There is a smaller version of 7" in case it fits better into the project.
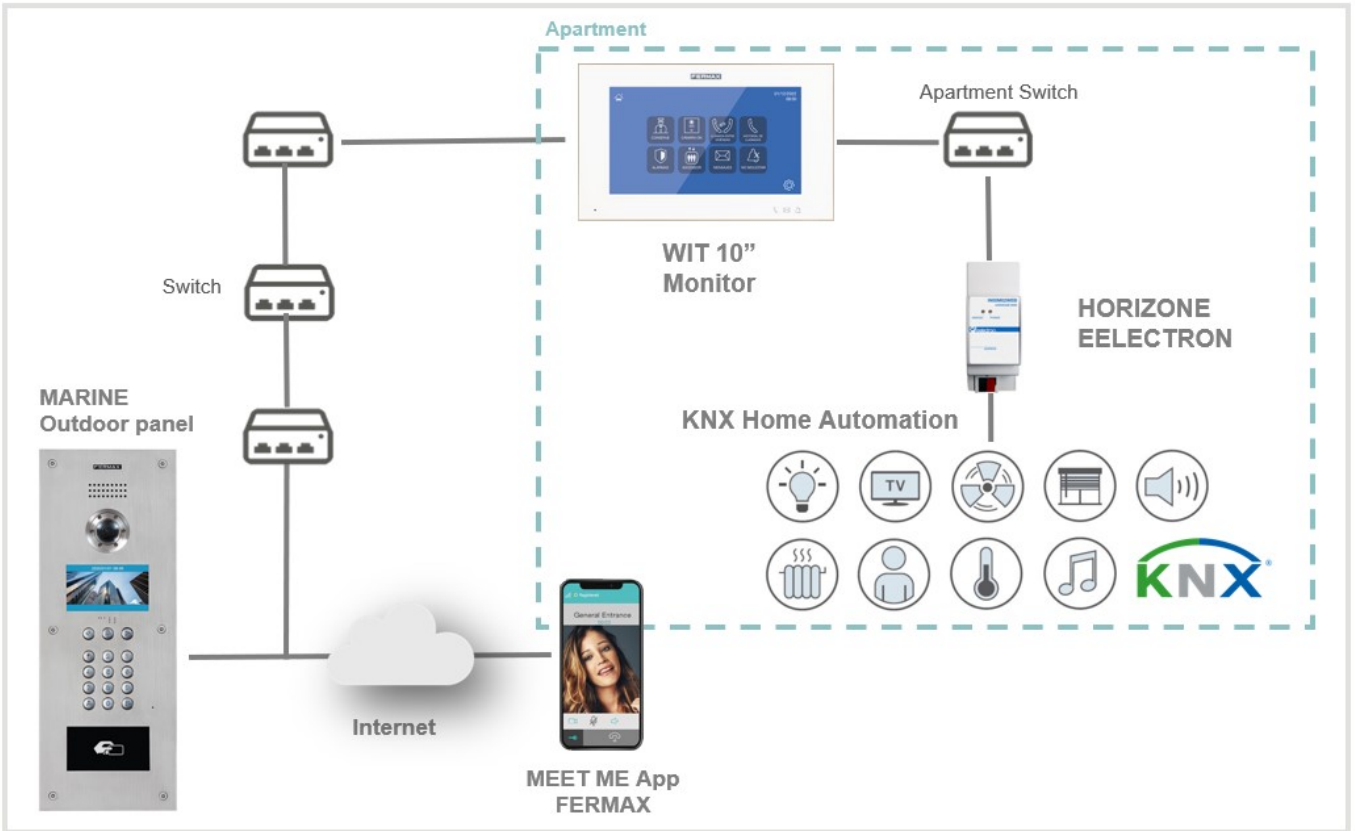

INSTALLATION REMARKS

INTEGRA APP installation in the monitor is done by a certification process, so the APP can be installed on the monitor it through IP in batch mode.

Interoperability is based exclusively in **HORIZONE MINI WEB SERVER KNX**. For other product versions please contact our Technical Support.
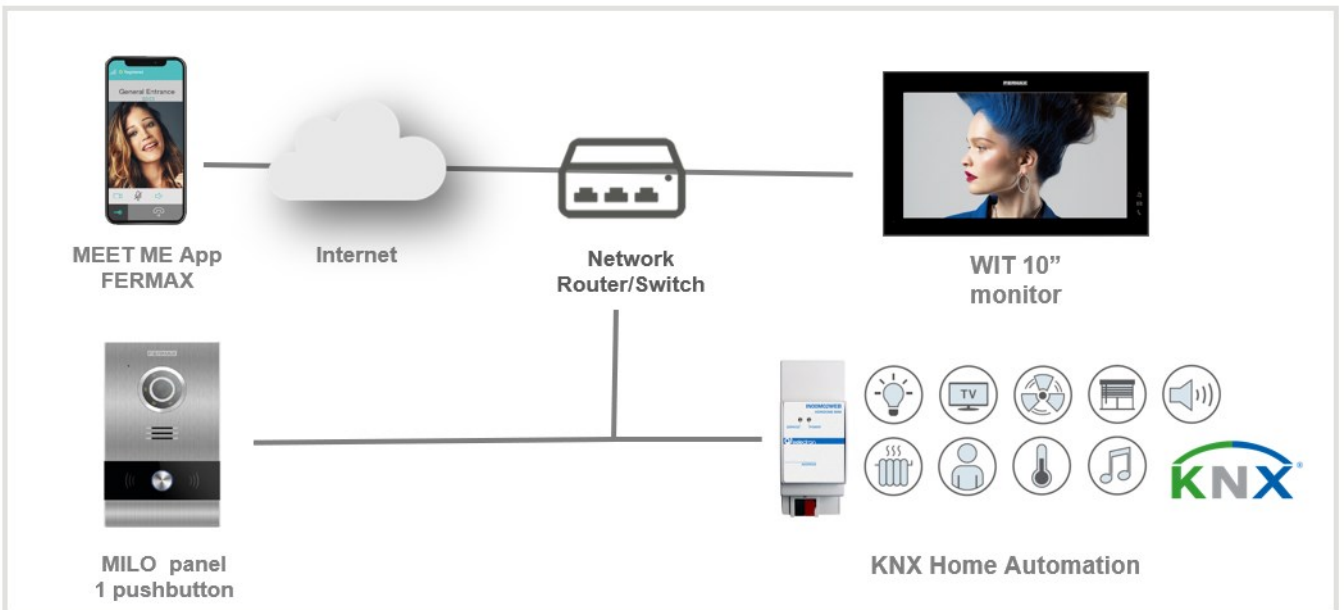

WHY FERMAX?

FERMAX is a worldwide reference in the video intercom industry. The products have been installed in the most emblematic projects in the world. FERMAX Distribution network, which is present in more than 70 countries, will provide the best Support and assistance.
